

wipeCenter

The screenshot displays the wipeCenter web interface. On the left is a sidebar with navigation links: 'All reports', 'Licenses', and 'Statistics'. The main content area shows a header with '1005 Licenses', a search bar, and a 'Delete' button. Below this is a table of reports with columns: Tag, Operator, Date / Time created, HDD info, Erasure standard, and Status. The table lists 15 reports, all with the operator 'ANDRE K' and status 'Baseline level'. Each row has 'View' and 'PDF' buttons. A 'Report Viewer' window is open in the foreground, showing detailed information for a specific report, including report ID, date, and hardware details.

Our WipeCenter plays an important role within the EU GDPR requirements (article 17, Right to be forgotten and to erasure), for following and auditing this practice. The WipeCenter is a state of the art solution to compliment the erasure process. Once the data has been erased, a proof report of the erasure is sent over the network to a secured database within the organization, for storage and future audit-trail. The WipeCenter enables the day-to-day erasure management, and ensures an efficient and secure automation process, labor costs reduction, and EU GDPR compliance.

Features

Benefits

- Installed as standalone (no Internet required)
- Can be implemented organization-wide, or within a closed LAN
- Works in combination with the PXE server
- PXE boot reports sent to WipeCenter
- Extensive report management (search, import, export, delete, edit)
